Contents show] Hardware Requirements To use AutoCAD, you will need a computer running Windows,

macOS, or Linux. The version of AutoCAD that you download can be run on any version of these operating systems. Processor Speed is the number of operations that the processor can perform per second. Hard Disk Space is the space available on your hard drive to store the Autodesk

software. This is the space needed for the software application and any documents that you create. A minimum of 4 GB of free disk space is needed for running AutoCAD. Graphics Card: If you have a graphics card on your computer, make sure that it has at least 512 MB of RAM. AutoCAD supports 32-bit graphics cards or newer 64-bit graphics cards. Cables: If you connect the computer to a network or a monitor, make sure

that your computer has an Ethernet port and that your network cable is connected. This is necessary for communicating with AutoCAD. [Click here](#) for more detailed hardware requirements. AutoLISP, named the Autodesk
LISP, is the first dialect of the
LISP programming language that
is not based on the Common
Lisp dialect. It is based on the

foundation of the modernized Autocode language, and shares some functionality with it.

AutoLISP is a language designed to allow users to write applications that automate processes in AutoCAD and other Autodesk products. It is also a good way of creating plug-ins for AutoCAD. It also allows the integration of third-party products, such as EDDAS or AutoCAD Architect. The basic syntax is similar to common

LISP languages, but some differences exist. It includes a line number prefixing system. The language also has predefined variables, operators, macros, functions, modules, functions, events, operators, etc. AutoLISP was acquired by Autodesk in February 2004, but the team behind AutoLISP was later incorporated into the Autodesk LISP team. LISP was first available as an Autodesk plug-in. AutoLISP 2.0 debuted in

AutoCAD 2005, and AutoLISP 5.0 came with AutoCAD 2010. The latest version of AutoLISP is AutoLISP 2016. AutoLISP has several key features: Reasonable speed due to not needing to parse or compile the code Coding is point and click, which does not require programming knowledge Free from the conventions of other languages, such as including unnecessary parentheses and commas Intuitive syntax, making it easily
