2gb Q: Replacing "Windows Server ADDLED" with "ADDLED/ADDS" I am looking for a way to replace a Windows Server 2008 ADDLED/ADDS reference, where a configured Windows Server 2008 machine is added to an Active Directory Domain (read below the changed part and it's explanation). I would like to change it to an ADDLED/ADDS, but there is no such option under the DCREC tab. "Windows Server ADDLED/ADDS" If you add the server to a domain by using the Windows Installation Disc, the computer will automatically begin domain joining with AD in less than 5 minutes. If the computer is not connected to the Internet or a network,

AD will not attempt to join the domain and the computer will not become available by using DNS. "ADDLED/ADDS" If you add the server to a domain by using the Add To Domain wizard

on the Windows Installation Disc, the computer will automatically begin domain joining with AD in less than 5 minutes. If the computer is not connected to the Internet or a network, AD will attempt to join the domain and the computer will become available by using DNS. I already changed "Windows Server 2008" to just "Windows Server" and it does change the end results. Does anyone have any ideas? It's causing me problems in automated software builds, which is also stopping me from mass-migrating older test machines to this build on a network. I'm thinking it's because of this section in c:\windows\system32 tds.exe and the other httpd.exe file under c:\windows\system32\ [System.Text.Encoding]::ASCII.GetString(\$data = \$rdr.ReadLine(), 16, \$rdr.ReadTimeout) \$rdr.MoveToServer().WaitFor(\$data 570a42141b
